

# GPU Programming Lab1 Report

## 3. Implementation:

Swap the characters of the 1st and the 3rd position of the word, and the 2nd and the 4th position of the word; 5th and 7th of the word, etc. For those who don't have a partner to swap (at most the last two characters of the word), replace them with '-'. The space remains the same.

Ex. "abcdefghij " -> "cdabghef— "
